SESSION 2024-2025

INTRODUCTION

Security of the computer files and folders have been a core issue ever since the advent of the windows. Passwords were then introduced to solve this issue but they themselves lend a host of disadvantages.

- i) Passwords can be easily remembered.
- ii) Passwords can be cracked with some efforts

Here our aim is to overcome the disadvantages of password and how we can tackle them.

OBJECTIVES (PROPOSED WORK)

LITERATURE REVIEW

EXISTING METHODOLOGIES

**PROPOSED METHODOLOGY/ PROPOSED APPROACH (ALONG WITH
BLOCK SCHEMATIC / USE CASE DIAGRAM ETC.)**

PLAN OF RESEARCH (SHOULD BE INLINE WITH OBJECTIVES)

Module 1 : Literature Survey

In this module, we will study the various research publications, and implement the knowledge gained from these papers in developing our project.

Module 2: Building a bluetooth interface and Registering device for encryption

In this module, a Bluetooth application interface will be designed using ASP.NET. This interface will scan, detect and pair the nearby Bluetooth devices and store this information in a database. After building the interface, a Bluetooth device that has been paired with the interface earlier can register itself for securing a particular folder stored on the computer/laptop.

Module 3: Applying Encryption Algorithm and Accessing the encrypted folder by applying Decryption Algorithm

In this module, an encryption algorithm will be applied on the folder selected by registered user and a password will be set by the user which will be asked when the user tries to access the encrypted folder. This folder will be hidden once the registered Bluetooth device moves out of range.

If the registered user wants to access the encrypted folder, a password will be asked to the user to enter. If the password is correct, then a decryption algorithm will be applied on the folder and the user will be able to access the encrypted folder.

Module 4: Sharing of Selected folder to other users

In this module, if the registered user wants to share the folder with other users, then user can either allow/deny access to the shared folder.

Module 5: System testing and Thesis writing

In this module, the developed system will be tested and a thorough thesis will be made.

Activities	Months					
	Aug-Sep	Sep-Oct	Dec-Jan	Jan-Feb	Feb-Mar	Mar-Apr
Module 1						
Module 2						
Module 3						
Module 4						
Module 5						

**IMPLICATIONS (EXPECTED OUTCOMES) AND
EXPECTED CHAPTER SCHEME OF THE PROPOSED
WORK.**
